# Lightcloud®

Lighting control made easy…

Lightcloud Blue is a powerful, flexible, simple lighting control system designed to manage lighting wirelessly, without the need for a gateway or hub. It's as easy as downloading the Lightcloud Blue app, connecting your enabled products, and quickly configuring them. Download the Lightcloud Blue app today to get started.
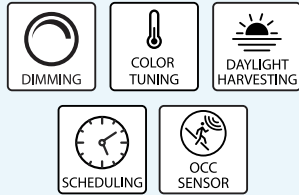

No special wiring required.

Lightcloud Blue is available on hundreds of RAB products for interior and exterior applications. Gone are the days of running additional wiring for dimming, schedules, and timeclocks!
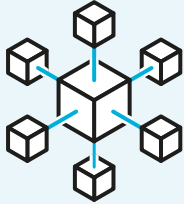

Bluetooth® Mesh technology.

Lightcloud Blue devices are controlled via an independent, Bluetooth Mesh system without the need for Wi-Fi. With traditional Wi-Fi, each device must be within range of the router. With a mesh network, each device extends the range of the network by repeating the signal from other devices. Each device in that system can communicate directly with any other device in it.
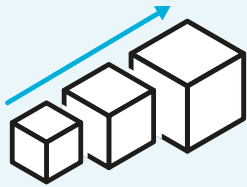

RAB®

Easy set up.

Building your Lightcloud Blue system is as simple as installing the lighting, turning it on, and opening the app on your mobile device. Once provisioned, you can begin controlling your lights instantly!

Rapid Provisioning.

Rapid Provisioning is a patented technology that allows users to easily commission devices in large groups, so you can get hundreds of devices connected in minutes instead of hours—that's up to 10x faster than any other competing control system on the market!

Scalable and flexible.

Lightcloud Blue makes it simple to start small and scale up, letting you add hundreds of thousands of devices to your system! Because it's so easy to grow, Lightcloud Blue is equally capable of managing residential, commercial, industrial, and exterior applications.

SmartShift® circadian lighting.

SmartShift is a circadian lighting system available on various Lightcloud Blue products (Nano required) that can promote better sleep, health, and happiness. Once installed alongside a Lightcloud control system, it automatically tunes the color and intensity of indoor lights throughout the day, mimicking the sun's changing light as it rises and sets. The mobile app includes pre-programmed schedules that are ideal for school, hospitals, assisted living, and office spaces, to help our bodies get back in sync with the sun.

Expand your system's features.

Add the XDIM Bridge and a Lightcloud Gateway for even more exciting system features, like demand response, remote access, BACnet integration, and more!

Big rebates.

The Lightcloud Blue system is on the Design Lights Consortium (DLC) Network Lighting Controls (NLC) Qualified Products List and is eligible for rebates from DLC Member Utilities.

DLC system: N1XMLOEATBA (Interior)   NHCZ2BIA17L (Exterior)

Support and training included.

We want you to feel confident with our system, our products, and with RAB as a company. To ensure this, RAB is available 24/7 to help Lightcloud customers with setup and commissioning. We also offer free training services to make sure every customer and user can enjoy the power and simplicity of Lightcloud. Support is comprised of a team of engineers and lighting control specialists who are ready to answer your questions.
