Outdoor Motion Sensor
Installation Manual

It's easy
to add
motion detection
to your
lantern!

RAB[®]
LIGHTING

Contents

Poly Bag Contents

Specifications:

Relay On/Off Model:

120 VAC, 60 Hz
500 W Incandescent
600 W Electronic Ballast (LED)

Voltage:

120 Volts AC

Power Consumption:

One watt

UL Listing:

Raintight Photoelectric Switch Suitable for wet locations.

Time Adjustment:

5 seconds to 15 minutes

Quick Test Time:

5 second test time for fast installation.
Works day or night.

Detection Zone:

Full 180° by 30'

"No Hands" Auto Testing:

Auto mode starts after 3 minutes of testing. No adjustment needed.

Built for Severe Conditions:

Double weatherproofing for long life.

Photoelectric Control:

Deactivates lights during daylight.
Fully adjustable for 24 hour operation or custom applications.

Vandal Resistant Lens:

Hard lens resists casual vandalism.

Case Construction:

Precision molded Lexan®

Color Matched Lens:

White lens with white units.

Surge Protection:

Withstands up to 3000 Volts

Manual Override:

Double flip wall switch logic prevents activation by short power outages.
Resets to auto at dawn.
No extra wiring needed.

LED Detection Indicator:

Glows red day and night for "on-guard" deterrence.

RF Immunity:

Circuits fully shielded for maximum radio frequency immunity.

Why RAB Sensors are BEST for You?

Smaller is better!

Smart Lantern uses state-of-the-art surface mount technology (SMT), just like cellular phones and beepers. SMT gives you more reliability, greater RF immunity, and a compact sensor that can fit neatly where others cannot.

Wider is better!

The wide 180° view detects movement along the entire side of a building with only one compact sensor. It will detect people as they exit or enter. It takes several conventional sensors to get the same coverage.

Molded is better!

No leaky gaskets or bug hotels with Smart Lantern. The hard lens is molded as part of the case. It's vandalproof, rainproof, bugproof and absolutely sealed.

Caution

- All wiring **MUST** comply with local electrical codes and should be installed by qualified electrician.
- Read entire Installation Manual before proceeding.

TURN OFF POWER BY REMOVING POWER FUSE OR TURNING OFF CIRCUIT BREAKER BEFORE INSTALLATION.

- Total lighting load must not exceed: 5 Amps, 500 Watts incandescent quartz when sensor is used remotely (250 Watts when floodlights are mounted to sensor) or 100 Watt fluorescent at 120 Volts or 5 Amps, 450 Watts LED at 120 Volts with 0.8pF driver or 5 Amp, 300 Watts LED at 120 Volts with 0.5pF driver. To switch more wattage, an electrician can install an additional relay.
- Line Carrier Remote Control Systems such as X-10, Leviton or Radio Shack are incompatible with sensors and cause false activations.
- Do not install on circuits feeding motor loads such as kitchen appliances, HVAC equipment, washer/ dryer or garage door openers.
- Sensor must be below and as far as possible away from lights.
- Mount 5'-8' high for optimum range and direction. Lower mounting height will reduce range (which may be desired).
- Turn controls gently. Do not force past stops.

- Sensor functions best when movement is across its detection pattern, not towards the sensor.

Assembly and Wiring

1. Choose Clapboard Cut or Straight Wall Mounting Plate. Smart Lantern may be painted to match the wall finish, if desired. Mask the lens area carefully with the Lens Mask provided or with masking tape before painting.
2. Measure the length of sensor extender needed to give the sensor a clear view below all parts of the lantern. Use hacksaw to cut off excess extender length, if necessary.
4. Bring wires from sensor up through the wireways in the extender. Keep wires in place by press fitting the plastic wire retainers provided onto the posts of the wireways.
5. Fasten the sensor extender to the Wall Mounting Plate with the two screws provided.
6. Bring power leads, lantern leads and sensor leads into box.
7. Attach ground wire(s) to outlet box grounding screw.

3. Once the proper length of the extender has been determined, drill through two holes to line up with the Wall Mounting Plate. Note that there are drilling guides to make drilling easier.

8. Strip 1/2" insulation from leads. Connect as shown in Wiring Diagram.
9. Twist on wire nuts. Secure with electrical tape.
10. Fasten lantern and Mounting Plate to box using Mounting Nipple and Crossbar provided. Use silicone sealant around all openings.

11. Screw in light bulbs. Turn on power.
12. Conduct Walk Test to adjust sensor response.

Wiring Diagrams

To override sensor with a manual switch

To switch more than rated load

Multiple sensors:

Wiring more than one sensor together is recommended only for the experienced installer because it becomes difficult to troubleshoot. Single sensors that control their own lights pinpoint movement more accurately and operate better.

Power Quality:

Sensors should not be installed on a circuit that also feeds motor loads such as HVAC equipment, kitchen appliances, or garage door openers. If voltage varies significantly from 120 volts, sensors may malfunction.

How Does RAB's Smart Lantern Work?

The **Smart Lantern** infrared sensor “sees” small temperature changes caused by the motion of people or cars within its detection zone and turns on lights automatically. It welcomes visitors and may deter intruders.

How long do the lights stay on?

Lights remain on as long as there is movement within the Detection Zone. Once the zone is vacated, lights can be adjusted to remain on approximately 5 seconds up to 15 minutes.

Will the sensor detect animals?

Smart Lantern may detect large animals. Having animals trigger the sensor can give property a “lived-in” look. You can limit animal detection by placing opaque weatherproof tape on the lower part of the lens or using the bottom mask on the Lens Mask Kit provided.

What does Manual Override do?

Keep lights on by flipping the wall switch two times within 5 seconds. Sensor resets to auto mode at dawn. No extra wiring needed.

How are the Time, Sensitivity and Photocell adjusted?

TimeControl: Sets the time that lights will remain on after the Detection Zone is vacated from approximately 5 seconds to 15 minutes. Use the adjustment tool provided to turn clockwise to increase the time.

Factory Setting: 5-8 minutes.

Photocell Control: For night only operation, use the tool provided or a small screwdriver to turn the Photocell Control all the way counter-clockwise (to the moon symbol). For operation in low level lights, turn the knob all the way clockwise (to the sun symbol). Adjust counter-clockwise to have the sensor come on later at dusk, clockwise to have it come on earlier. Turning photocell control will show when the sensor “thinks” the current ambient light level = night, because the lights will turn on. Factory setting : Night Only

Sensitivity: Increases or decreases the responsiveness and range of the sensor.

Control Panel:

Turn controls gently using adjustment tool provided. Do not force past stops.

Picking A Location

Location Considerations:

- Choose a location from which the sensor can “see” all the paths of movement that will be illuminated by its lights.
- Smart Lantern may be painted to blend with existing house color. Carefully apply masking tape to the sensor lens area or use the Lens Mask Kit provided before painting.
- Sensor functions best when the direction of expected movement is across its detection pattern, not towards the sensor.
- If wall mounting, locate 5-8' high for optimum range. Lower mounting height will reduce range. Sensor must be below and as far as possible away from lights.

Mounting Plates :

To order mounting plates without arm extender and sensor:

CAT#	Description
DUM1	Straight Wall Mounting Plate
DUM2	Clapboard Cut Mounting Plate

If Clapboard or Straight Mounting Plates are used without arm extender and sensor, use the white plastic Mounting Plate Cover to close up the opening on the bottom of the mounting plate.

Detection Pattern:

- The sensor has a “Double Look Down” Lens with one “Look Out” zone and two “Look Down” zones, for excellent detection both at long and close range.
- Detection extends out a maximum of 30 feet and is 180° wide.
- To reduce the Detection Pattern length, aim the sensor down by adjusting the tilt set screw underneath the sensor using the Hex Wrench provided.

Tilt Set Screw

- To reduce Detection Pattern width, mask the sides of the lens with the Lens Mask Kit provided or opaque weatherproof tape.
- If sensor is mounted by a doorway at the top of stairs, be aware that the elevated mounting height may extend the sensors range.
- As distance from the sensor increases, it will take more movement to be detected. For instance, at 10 feet, a half step will be enough, while at 30 feet, several steps will be necessary.

Aiming and Walk Testing

Test Period:

The sensor has a 3 minute Test Period which allows it to be aimed and walk tested day or night.

- For the first 30 seconds, the lights will be turned on. During this time, test that all fixtures and lamps function properly.
- For the next 3 minutes, the sensor will keep lights on for 5 seconds each time it detects movement in its Detection Zone. The sensor will change to Automatic Mode after the 3 minute Test Period.
- If another 3 minute Test Period is desired, turn the power off for at least 10 seconds and back on again.

Walk Test:

The purpose of the Walk Test is to check and adjust the coverage pattern.

1. Aim the sensor approximately to cover the area you desire.
2. Start outside the Detection Zone and walk across the zone until the lights go on. As distance from the sensor increases, it will take more movement to be detected. For instance, at 10 feet, a half step will be enough, while at 30 feet, several steps will be necessary.

3. To reduce range, use the lens masks provided or tilt sensor down. Repeat steps #2 and #3 until you are satisfied with the coverage.
4. The Time Control is factory set between 5-8 minutes. This period starts after the movement in the Detection Zone ceases. If less time is desired, turn the time control counter-clockwise. For more time, turn the control clockwise.
5. The sensor is factory set for night only operation. To obtain full operation 24 hours per day, turn the Photocell Control fully clockwise to the sun symbol. Intermediate settings will allow the sensor to operate earlier or later at dusk.
6. Your sensor is ready for operation. See the Technical Tips pages if additional help is needed.

Control Panel:

Turn controls gently using the adjustment tool provided. Do not force past stops.

Photocell
Turn to moon symbol for night only

Turn to sun symbol for 24 hour operation (lights turn on night and day)

Technical Tips: Lights Do Not Turn Off

1. Make sure sensor is not aimed at something that would move or change temperature such as waving branches, water, air conditioners, windows or heating vents - even on neighboring property. You can test for infrared sources in the area by placing a box or bag over the sensor. Put sensor into Test Mode. After the initial 30 seconds of the lights being on, lights should stay off. Wave your hand inside the bag in front of sensor. Lights should go on and then time out. If sensor operates properly when covered, check items 2-6.

Problem: Sensor is triggered by unwanted movement or heat source.

Solution: Tilt sensor (Page 8) or mask lens in the direction of the source. Move sensor or source.

2. Make sure sensor is mounted firmly and does not move even slightly when touched. If it moves, tighten all screws.
3. Make sure that Smart Lantern is not mounted on an unstable object such as a tree or a pole that will move in the wind.
4. Was sensor wired hot? If so, circuitry may have been damaged.
5. Make sure sensor is not aimed within 30 feet of a road.

5. Make sure sensor is not aimed within 30 feet of a road.

Problem: Passing cars activate sensor.

Solution: A 30' safety zone between the sensor and road is recommended to avoid activation from passing cars. You may tilt sensor to not aim in the direction of the street or mask top of sensor lens to reduce range (Page 8).

6. Make sure heat from lights is not triggering sensor. Make sure the sensor is below and as far as possible away from lights.

Technical Tips: Range appears limited

1. Check that the sensor is level from side to side and pointed at the area you desire. If unit is tilted, part of the Detection Zone may be high in the air over people's heads.

Solution: Position sensor exactly level from side to side.

2. Check that the sensor is not mounted too high. If mounted above 20 feet, much of the usable range will be lost.

Solution: Mounting at 5' to 8' allows maximum range.

3. If sensor is painted, make sure there is no paint on the lens and that the lens paint mask is removed.

4. Check that movement is not directly towards sensor. Sensor will see movement across its pattern more quickly. To fix, move the sensor.

5. Check that movement far away and directly towards sensor is not entirely within one Detection Pattern finger.

Problem: Sensor will not detect until movement crosses from one finger into a second finger.

Solution: "Micro Adjust" sensor by tilting sensor 1/16". This small adjustment may move the zones to allow earlier detection.

Technical Tips: Lights Do Not Turn On

1. Check that lamps and fixtures work. Compare wiring to the Wiring Diagram in this manual. Check that the power is on.
2. If installing during daylight, remember that the sensor will provide a 3 minute Test Period after power is turned on. After 3 minutes, the sensor will switch to Automatic Mode and will not work during daylight if the Photocell Control is turned to or near the night only position (fully counter clockwise to the moon symbol).

If you require another 3 minute Test Period, turn the power off for at least 10 seconds and back on again.

If you require the sensor to operate both in low level light and at night, turn the Photocell Control knob clockwise to the sun symbol.

3. Check that lights from other sources, such as adjacent porch lights, garden lights, streetlights or lights from inside the house are not in the sensor's view. See #1 under "Lights Turn Off Too Quickly".
4. Was sensor wired hot? If so, circuitry may have been damaged.
5. If sensor is painted, make sure there is no paint on the lens and that the lens paint mask is removed.

Lights Turn Off Too Quickly

1. Check if sensor is being "tricked" by reflected light. If lights shine or reflect into the photocell, (located behind the lens), the unit will go on briefly and turn off thinking it is daytime.

Problem: Lights reflect into photocell or lights shine directly into photocell.

Because the Smart Lantern can fit a wide variety of lanterns, it is possible some lantern's shiny metal or glass surfaces will allow reflections to be seen by the sensor.

Solution: Adjust Photocell Control slightly clockwise, toward the sun symbol. This allows the sensor to function in brighter ambient light conditions. Alternatively, move the lights or mask the lens in the direction of the lights or reflections. If the problem persists, it may be necessary to increase the length of the sun shield over the sensor using weatherproof tape or some other material.

Technical Tips: Lights Turn On and Off Incorrectly

1. Make sure the sensor is installed on its own dedicated circuit free of motor loads such as HVAC equipment, kitchen appliances or garage door openers.
2. It is not recommended to wire sensors in parallel. More than one sensor wired together makes them difficult to troubleshoot. Disconnect multiple sensors and test separately.
3. Keep all people completely out of the detection pattern to make sure the sensor is not detecting them.
4. Make sure sensor is located below and as far as possible from its lights. Heat from the lights may trigger the sensor.
Solution: Move sensor below and away from the lights.
5. Make sure lights are not visible from or reflecting back into sensor. Check for white or reflective surfaces close to the sensor.

Solution: Aim sensor away from lights and reflective objects or mask the lens in the direction of the light or reflection.

6. Heavy rain, snow or high winds may activate the sensor occasionally.

Solution: Reduce sensitivity control settings, mount in a more protected area and/or mask the lens if this is a constant problem.

7. Make sure sensor is not aimed within 30' of a road or sidewalk. Passing cars will activate sensor.

Solution: Mask the top of the lens to reduce Detection Pattern Length.

8. Self ballasted PL lamps may cause cycling (on-off).
9. Check solutions 1, 2, 3, 5 & 6 under "Lights Do Not Turn Off" (Page 10).

Technical Tips: Lights Turn On For Unknown Reasons

1. Lights may turn on occasionally during rain, snow and windstorms because the sensor is detecting changes in temperature. If this is a constant problem, mount the sensor in a more protected area.
2. Tilt the sensor lower - it may be seeing distant objects moving.
3. You may not be aware that animals have triggered sensor. Check sensor aiming to reduce nuisance triggering or mask the lower part of the lens with opaque weatherproof tape.

4. The sensor may turn on occasionally during voltage surges.
5. A possible source of "mysterious" sensor activations are strong local radio signals. Check for nearby CB, Ham, VHF radio transmitters or Cellular telephones. The sensor may be activated, but will not be permanently impaired by these signals.
6. Check other solutions mentioned under on pages 12 & 13.

RAB Sensor Warranty

The RAB Smart Lantern will be free from defects in materials and workmanship for a period of five (5) years from the date of delivery to the end-user.

Sensors must be installed by a properly insured and licensed electrician or under the supervision of a licensed electrician and the product must be in its original, unopened and new condition at the time of installation. The information provided in the RAB Sensor Owner's Manual is critical in determining the location, conditions, intended use and other requirements with respect to the use and installation of a sensor product. Using a sensor product in any manner other than as disclosed in the RAB Owner's Manual automatically voids the warranty.

Exceptions. The above warranties shall not apply and RAB makes no representations or warranties with respect to:

- a. problems caused by acts of God including without limitation lightning strikes; and
- b. problems caused by any improper action or failure to act by any person or entity other RAB, including without limitation problems caused by improper installation by the buyer, an authorized RAB distributor, or any other person or entity; and
- c. using or installing a sensor product in any manner other than as disclosed in the RAB Owner's Manual.
- d. use with Instant Start ballasts; use with Instant Start ballasts will void the RAB warranty.

Out of warranty sensors replacement program.

If your sensor is out of warranty or if damage is unrelated to its original manufacture, return your sensor (freight prepaid and insured) directly to us (at RAB Lighting Inc. 170 Ludlow Ave. Northvale, NJ 07647) with a check for \$20.00 made payable to RAB Lighting Inc. We will repair or replace your sensor promptly.

RAB Lighting Product Warranties

The following warranties apply to RAB Lighting, Inc. ("RAB") products that meet all of the following conditions: (a) the product was purchased by the contractor or end-user from an authorized RAB distributor who purchased the product directly from RAB and from no other source; (b) if the product has been installed, the entire installation was performed by a licensed electrician or under the supervision of a licensed electrician and the product was in its original, unopened and new condition at the time of installation. RAB LIGHTING DISCLAIMS ALL REPRESENTATIONS AND WARRANTIES WITH RESPECT TO ALL OTHER PRODUCTS, INCLUDING WITHOUT LIMITATION PRODUCTS THAT HAVE BEEN PURCHASED FROM ANY PERSON OR ENTITY OTHER THAN AN AUTHORIZED RAB DISTRIBUTOR, OR INSTALLED BY ANY PERSON OR ENTITY OTHER THAN A LICENSED ELECTRICIAN OR UNDER THE SUPERVISION OF A LICENSED ELECTRICIAN, AND ALL PRODUCTS THAT ARE USED OR ARE OTHERWISE NOT IN THEIR ORIGINAL RAB LIGHTING PACKAGING AT THE TIME OF INSTALLATION.

Remedy. RAB's obligations for breach of warranty shall be limited to repair or replacement, at RAB's option, of any products or parts which prove to be defective, provided that buyer gives RAB written notice and returns the defective product to RAB in accordance with RAB's return material authorization (RMA) policies, and RAB confirms the defect. Buyer is responsible for all costs to de-install defective products and re-install replacement or repaired products and RAB shall not be liable for labor or other costs related to de-installation or re-installation.

DISCLAIMER. THE FOREGOING WARRANTIES ARE IN LIEU OF, AND RAB EXPRESSLY DISCLAIMS, ALL OTHER REPRESENTATIONS, GUARANTEES AND WARRANTIES, EXPRESS OR IMPLIED IN FACT OR BY LAW, INCLUDING WITHOUT LIMITATION ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR OTHERWISE. THE FOREGOING WARRANTIES STATE RAB'S ENTIRE AND EXCLUSIVE LIABILITY, AND BUYER'S SOLE AND EXCLUSIVE REMEDY, IN CONNECTION WITH THE PRODUCTS AND ALL PARTS, THEIR DESIGN, SUITABILITY FOR USE, INSTALLATION AND OPERATION.

LIMITATION OF LIABILITY. RAB shall not be liable under any theory of relief, including without limitation breach of warranty, breach of contract, tort (including negligence), strict liability, or otherwise, arising out of or related to any breach of warranty, any RAB products and the use thereof, or any other acts or omissions of RAB for: (i) any indirect, incidental, special or consequential damages, whatsoever (including without limitation, loss of anticipated value of a business or its reputation) or (ii) any damage or loss in excess of the price actually paid by buyer to the authorized RAB distributor for the products that caused the damages. Any action by buyer must be commenced within one year after the cause of action has accrued.

Miscellaneous. These product warranty terms shall be governed by the laws of the State of New York. Buyer consents to the personal jurisdiction and venue of the courts of the State of New York. Any legal or equitable claim of any nature arising hereunder shall be filed and maintained in the state or federal courts in the State of New

York and buyer agrees that such courts are a convenient forum for adjudication. In the event that suit is necessary to recover amounts owed RAB, buyer shall be liable for reasonable attorney's fees, interest and costs of collection. No agreement or understanding varying the terms and conditions hereof shall be binding upon RAB or buyer unless in writing and signed by duly authorized representatives of both parties. These product warranty terms shall inure to the benefit of and be binding upon the parties hereto and their respective successors and assigns.

Toll Free Technical Assistance

If you need technical assistance, please do the following:

1. Re-read the Technical Tips sections of this manual.
2. Call the Tech Help Line at 888 RAB-1000, 8AM to 6PM Eastern Time M-F and we will be glad to help you. Before you call, please have the following information handy:
 - a) Catalog number of your unit;
 - b) Wattage, types and locations of lights connected to the sensor;
 - c) The electrical circuit on which the sensor is installed. What else does it feed? How is the sensor power switched?
 - d) Serial Number (4 digits) on the back of the sensor.
 - e) This installation Manual

RAB Lighting cannot give electrical wiring instructions by phone. Please consult a qualified electrician

Note: These instructions do not cover all details or variations in equipment nor do they provide for every possible situation during installation operation or maintenance.
