FOR IMMEDIATE RELEASE

RAB Lighting Earns Multiple Prestigious Design Awards for Breakthrough Innovation in Light Control

New York, NY – RAB Lighting, a leading manufacturer of innovative and energy-efficient lighting solutions, has won a series of prestigious design awards recognizing the company's continued commitment to pushing the boundaries of what's possible in light distribution, color control, and affordability.

RAB Lighting recently received top honors from Global Design News and Good Design for its LFX and LPACK S/M families—two solutions that demonstrate how advanced optical engineering and intelligent color technology can be delivered at price points that make professional-grade control accessible to every project.

RAB LFX FLoodlight - Winner of 2025 Good Design Award.

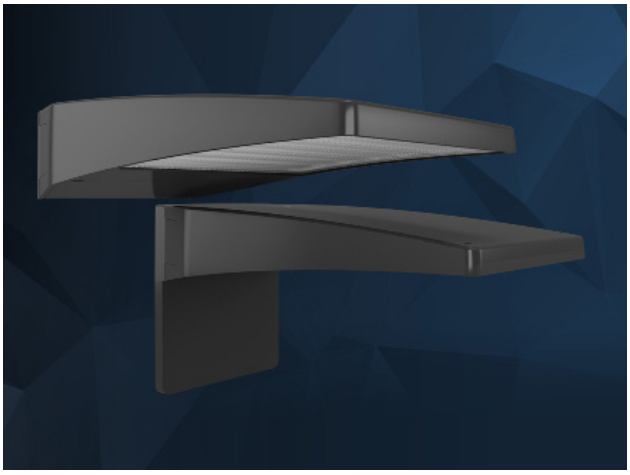

The LFX floodlight is a breakthrough in tunable light distribution, giving users the ability to precisely shape beam patterns and dial in color to match any environment or application. Features once reserved for specification-grade fixtures at premium prices—dynamic beam shaping, full-spectrum color tuning, and architectural-quality output—are now within reach for mainstream commercial and residential projects. Whether enhancing architectural features, creating dynamic visual impact, or improving visibility and safety, LFX delivers a level of creative control the market hasn't seen at this price point.

The LPACK S/M wall packs reimagine a category long defined by compromise. By combining refined optical design with a cleaner, more modern aesthetic, LPACK delivers tightly controlled light distribution that reduces spill, cuts glare, and improves uniformity—all while simplifying installation and lowering total cost of ownership. It's proof that the workhorse fixtures of commercial exterior lighting don't have to look or perform like afterthoughts.

This latest recognition builds on a strong legacy of award-winning product design. In 2024, RAB earned Good Design awards for SLIM, STRIP, and SLIM34, as well as multiple Global Design News recognitions for SLIM, TOMO, AEROBAY, and W34. TOMO and AEROBAY were also honored with internationally recognized iF Design Awards. In 2023, the RAIL product earned Green Good Design and LIT Awards, building on 2022 honors for the L34, including the Core77 Sustainability Award, NY Product Design Awards, and Good Design.

"With LFX and LPACK, we set out to push the envelope of what's possible in light distribution and color control, and then we engineered it to a price point the market didn't think was achievable," says Ross Barna, CEO and Chairman of RAB Lighting. "That's the work we're most proud of—taking capabilities that used to live at the top of the spec-grade market and putting them in the hands of every contractor, distributor, and specifier."

"We didn't chase awards — we chased better light," adds Glen Oross, RAB Director of Industrial Design and UX. "By obsessing over form, material, and performance in equal measure, we created fixtures that don't just illuminate spaces but elevate them. The recognition is simply a reflection of our commitment to design that works as beautifully as it looks."

LPACK S/M Wall Pack - Modernized design with simplified installation.
