GOOSENECK

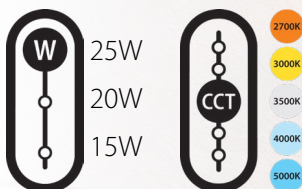

Timeless gooseneck style, on-site control.

The field-adjustable LGOOSE.

Dial it in on site.

Skip the guesswork at spec time. Set wattage and color temperature right at the fixture, so a single product covers a range of jobs and last-minute changes never mean a reorder.

What's your angle?

The head rotates a full 360° and tilts 180° in precise 15° increments. Wash a sign, graze a façade, or light an entry with the same fixture, then lock in the angle that hits the mark.

Set it and forget it.

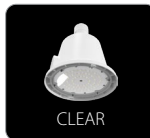

An integrated dusk-to-dawn photocell with an on/off switch means hands-free operation and automatic energy savings, with no separate control to spec.

Build the look you want.

LGOOSE is available with a clear or frosted lens. Choose from three shade styles and pair any of them with four arm options to suit the architecture. It's the timeless gooseneck silhouette, configured your way.

Finished to match.

The Gooseneck comes in three finishes that complement most architecture. Need something specific that goes beyond black, white, and bronze?
