Field-adjustable flexibility.

One fixture does the work of three with field-adjustable light output. 2x2 models can be set to 19/29/39W and 2x4 models can be set to 29/39/49W. Output can be changed before, during and after installation.

See the difference.

Edge-lit technology creates direct and indirect light, and the high-reflectance finish maximizes output. The diffuse light guide provides uniform distribution and reduces glare.

Stay in control.

For additional energy savings and utility rebates, all models are available with a factory-installed Lightcloud Controller or Sensor. A microwave standalone sensor is also available for occupancy and daylight sensing.
