Different looks for different spaces.

The SWISH Island is the latest addition to our center basket category, with a unique, artistic design that lends a bit of sophistication to a room. Its edge-lit technology creates both direct and indirect light, and delivers soft, even output.

Stay in control.

For additional energy savings and utility rebates, all models are available with a factory-installed Lightcloud® Controller or Sensor. A standalone microwave sensor is also available for occupancy and daylight sensing.

Field-adjustable flexibility.

One fixture does the work of six with field-adjustable lumen output and color temperature, helping to save shelf space, reduce carrying costs, and increase product availability. 2x2 Models can be set to 19/29/39W and 2x4 models can be set to 29/39/49W, both with the choice of 3500K or 4000K CCT. Output can be changed before, during and after installation.

Color Adjustable

2x2 | 3500K / 4000K

2x4 | 3500K / 4000K

Power Adjustable

2x2 | 19/29/39W
