INSTRUCTIONS
IVELOT Edge-lit Area Light

RAB Lighting is committed to creating high-quality, affordable, well-designed and energy-efficient LED lighting and controls that make it easy for electricians to install and end users to save energy. We’d love to hear your comments. Please call the Marketing Department at 888-RAB-1000 or email: marketing@rablighting.com

IMPORTANT

READ CAREFULLY BEFORE INSTALLING FIXTURE. RETAIN THESE INSTRUCTIONS FOR FUTURE REFERENCE.

RAB fixtures must be wired in accordance with the National Electrical Code and all applicable local codes. Proper grounding is required for safety. THIS PRODUCT MUST BE INSTALLED IN ACCORDANCE WITH THE APPLICABLE INSTALLATION CODE BY A PERSON FAMILIAR WITH THE CONSTRUCTION AND OPERATION OF THE PRODUCT AND THE HAZARDS INVOLVED.

WARNINGS:
• Make certain power is OFF before installing or maintaining fixture. No user serviceable parts inside.
• To prevent wiring damage or abrasion, do not expose wiring to edges of sharp objects.

CAUTION:
• For proper weatherproof function all gaskets must be seated properly and all screws inserted and tightened firmly. Apply weatherproof silicone sealant around the edge of the Back Box and/or Junction Box. This is especially important with an uneven wall surface. Silicone all plugs and unused conduit entries.

MOUNTING POLE ADAPTER TO THE POLE

1. Remove the Cover from the Pole Adapter.
2. Place the Pole Adapter and Bolster Plate up to the pole as shown in Fig 2.
3. If mounting onto a square pole, use the supplied square pole adapter plate between the Pole and Arm.
4. Line up the Pole Adapter and Bolster Plate with the Pole drilling pattern.
5. Place flat washers, lock washers and nuts on the 3/8-16 Bolts and tighten to the pole.
6. Feed supply wires from the pole through the mounted Pole Adapter.

MOUNTING FIXTURE TO THE POLE ADAPTER

Mounting the fixture to the pole adapter, Fig 1.
1. Feed wires from Fixture through Gasket into Pole Adapter.
2. Line up Pole Adapter and Fixture. Place flat washers and lock washers on the 3/8-16 Bolts inside the Pole Adapter and tighten securely to housing.
3. Make sure the Gasket is secure between Pole Adapter and Fixture.
4. Make necessary connections to the supply wires inside the Pole Adapter and knot wires for strain relief.
5. Replace the Cover. Tighten Screws and Secure Pole Cap.

FIG. 1

FIG. 2
POLE DRILLING DETAIL
Dimensions of the holes on PA and Bolster Plate. This template is not to scale. Please use measurements shown in Fig.3.

Mounting the universal arm on the Wall Box
1. Separate Wall Mount Cover and Wall Mount Box.
2. Orient box so that “TOP” is on top.
3. Feed supply wires through the Gasket and Wall Mount Box.
4. Secure Wall Mount Box (such as lag bolts and anchors) to a sturdy wall. Use appropriate mounting hardware such as lag bolts and anchors with washers suitable for the mounting surface.
5. Silicone around the edge of Gasket and/or junction box.
6. Line up Arm and Wall Mount Cover. Place flat washers, lock washers and 3/8-16 Bolts from wall bracket, inside the Arm and tighten securely.
7. Feed the wires out the Wall Mount Box Cover.
8. Bring fixture up to the Wall Mount Box and slide the stainless steel Tether from the fixture into the Key Hole Slot for hands-free wiring. Connect the supply wires to the fixture wires.
9. Check that Wall Mount Cover Gasket between Wall Mount Box and Wall Mount Cover is secure, and screw the cover on box using four screws.
10. Replace the Arm Cover.
11. Tighten Plugs and apply weatherproof silicone sealant to all unused conduit entry points. Use weatherproof silicone sealant between wall and Wall Mount Box.
INSTRUCTIONS
IVELOT Edge-lit Area Light

RAB Lighting is committed to creating high-quality, affordable, well-designed and energy-efficient LED lighting and controls that make it easy for electricians to install and end users to save energy. We'd love to hear your comments. Please call the Marketing Department at 888-RAB-1000 or email: marketing@rablighting.com

0-10V DIMMABLE WIRING

Universal voltage driver permits operation at 120-277V, 50 or 60 Hz. Units ordered with character ‘3’ are 347V 50Hz or 60Hz, ‘4’ are 480V, 50Hz or 60Hz. For 0-10V Dimming, follow the wiring directions in Fig. 8.

1. Connect the black fixture lead to the (+) LINE supply lead.
2. Connect the white fixture lead to the (-) COMMON supply lead.
3. Connect the GROUND wire from fixture to supply ground. Do NOT connect the GROUND of the dimming fixture to the output.
4. Connect the purple fixture lead to the (V+) DIM lead.
5. Connect the gray fixture lead to the (V-) DIM lead.
6. Cap the yellow fixture lead, if present. Do NOT connect.

SLIPFITTER MOUNTING

1. The Slipfitter fits a 2 3/8" O.D. Tenon. Place the slipfitter over the tenon and secure the fixture with 2 Set Screws on the side of the slipfitter.
2. Feed wires from Fixture through slipfitter and supply wires from Pole. Make the necessary connections in the slipfitter and knot wires for strain relief.
3. To adjust the angle of the slipfitter, remove 2 screws and the Slipfitter Cover Plate. Loosen the Locking Bolt and swivel fixture to desired angle. The graduation on the slipfitter cover plate can be used as guidelines to adjust the angle.
4. Tighten the Locking Bolt. Replace slipfitter cover plate. Tighten Screws and close the Plug.
5. Seal Plug using Teflon tape or silicone sealant.

FIG.5

FIG.7

FIG.8

LIGHT FIXTURE
**INSTRUCTIONS**

**IVELOT Edge-lit Area Light**

RAB Lighting is committed to creating high-quality, affordable, well-designed and energy-efficient LED lighting and controls that make it easy for electricians to install and end users to save energy. We’d love to hear your comments. Please call the Marketing Department at 888-RAB-1000 or email: marketing@rablighting.com

---

**0-10V DIMMABLE WIRING WITH WATTSTOPPER SENSOR**

Universal voltage driver and Wattstopper Sensor permits operation at 120-277V, 50 or 60 Hz. For 0-10V Dimming with Wattstopper, follow the wiring directions in Fig.9.

1. Connect the black fixture lead to the LOAD of Wattstopper Sensor.
2. Connect LINE of Wattstopper Sensor to LINE supply lead.
3. Connect the white fixture lead and NEUTRAL of Wattstopper Sensor to the COMMON supply lead.
4. Connect the GROUND wire from fixture and Wattstopper Sensor to supply ground. **Do NOT connect the GROUND of the dimming fixture to the output.**
5. Connect the purple fixture lead to DIM + of Wattstopper Sensor.
6. Connect the gray fixture lead to the DIM - of Wattstopper Sensor lead.
7. Cap the yellow fixture lead, if present. **Do NOT connect.**

---

**FUSE WIRING**

1. For single-fuse installations 120V, 277V, or 347V connect the fuse between the fixture neutral and supply neutral.
2. For double fuse installations 208V, 240V, or 480V connect the fuse between both supply neutrals and the fixture neutral.

---

**TROUBLESHOOTING**

1. Check that the line voltage at the fixture is correct. Refer to wiring directions.
2. Be sure the fixture is grounded properly.
3. Is the photocell, if used, functioning properly?
4. Check if the fuse has blown out.

---

**ACCESSORIES**

- IVA-SF - Single Fuse for 120V, 277V, or 347V
- IVA-DF - Double Fuse for 208V, 240V, or 480V
- IVA-SPU - 10kV Surge 120V & 277V
- IVA-SP3 - 10kV Surge 347V
- IVA-SP4 - 10kV Surge 480V

---

**CLEANING & MAINTENANCE**

**CAUTION:** Be sure fixture temperature is cool enough to touch. Do not clean or maintain while fixture is energized.

1. Clean acrylic lens with non-abrasive acrylic cleaning solution.
2. Do not open fixture to clean the LED. Do not touch the LED.

0-10V DIMMING

SWITCHED NEUTRAL
The “Switched Neutral” white with red stripe wire is the neutral line for the load being switched. This enables power measurement. See the Power Measurement section under “Functionality” for more information.
Setup & Installation

1 Turn off power

1a Find a Suitable Location

Use these guidelines when installing devices:

- If there is a clear line of sight between two Lightcloud devices, they can be placed up to 1000 feet apart.
- If the two devices are separated by ordinary drywall construction, try to keep them within 100 ft. of each other.
- Brick, concrete and steel construction may require additional Lightcloud devices to go around the obstruction.
Setup & Installation (cont’d)

2 Install your Lightcloud Controller

2a Install at a Junction Box (Indoor/Outdoor)

0-10V DIMMING

0-10V is a common method of low-voltage control of dimmable drivers and ballasts. **Purple:** 0-10V positive | **Gray:** 0-10V common

NOTE: The National Electrical Code requires that low-voltage wiring used in the same enclosure as high-voltage wiring have an equal or better insulation rating. You may need to complete your low-voltage wiring in another enclosure or use a partition.
At Lighting Panel or Trough

Space and code allowing, you may install Lightcloud devices directly in your breaker box or lighting panel. Alternatively, break out lighting circuits and install Lightcloud devices in a separate trough.
Setup & Installation (cont’d)

3 Labeling your device

For setup and maintenance, we provide two Lightcloud Device Tables with the Gateway: one that you can attach to your panel and one to hand off to a building manager. Attach the Device Identification stickers included with each device to a row, then write in additional information, such as Zone name, Panel/Circuit Number, and whether or not a zone uses dimming.

4 Power up

To add new devices to your Lightcloud network, call RAB at 1 (844) LIGHTCLOUD, or email us at support@lightcloud.com.
Confirm Device Connectivity

Confirm Status Indicator is Solid Green (see details below)

- **DEVICE IDENTIFICATION BUTTON**
  - Illuminated when device is powered
  - Press once to highlight this device in the Lightcloud Application
  - Press twice to toggle circuit on and off
  - Press twice and hold to set dim level
  - Press and hold for 10 seconds to remove this device from a Lightcloud network
  - Blinks when device is indicated from the Lightcloud Application

- **SIGNAL INDICATOR**
  Illuminates when the device receives a message and indicates the strength of the signal.
  - 3 - Best signal
  - 2 - Acceptable signal
  - 1 - Unacceptable signal
  Consult the “Finding a Location” section for more information

- **STATUS INDICATOR**
  Solid GREEN when connected to your Lightcloud network. Blinking RED when not connected. The device will automatically continue trying to connect to a network in Setup Mode.

Commission your devices
Log on to www.lightcloud.com or call 1 (844) LIGHTCLOUD
Functionality

Configuration

All configuration of Lightcloud products may be performed using the Lightcloud web or mobile application, or by calling RAB.

WE’RE HERE TO HELP:

1 (844) LIGHTCLOUD
or 1 (844) 544-4825
support@lightcloud.com

Operating Modes

CONTROLLER Provides switching and dimming for a single zone

TRIGGER Detect when an attached circuit is open or closed. For example, you could attach the Controller in Trigger mode to an existing occupancy sensor to allow your Lightcloud system to react to the sensor.
**REPEATER**: Disables zone control and power measurement, and extends the range of your network.

**POWER MEASUREMENT**: The Lightcloud Controller is capable of measuring the power usage of the attached circuit. In order to utilize this function, the neutral wire of the load must be connected to the white-red sense wire. If the Switched Neutral line cannot be used, it should be tied to the regular neutral wires (i.e. all neutral wires joined).

**POWER LOSS DETECTION**: If mains power to the Controller is lost, the device will detect this and alert the Lightcloud application.

**EMERGENCY DEFAULT**: If communication is lost, the Controller may optionally fall back to a specific state, such as turning the attached circuit on.

Any wires not in use must be capped off or otherwise insulated.
FCC Information:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

Note: This device has been tested and found to comply with the limits for Class B digital devices pursuant to Part 15 Subpart B, of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential environment. This equipment generates, uses, and can radiate radio frequency energy, and if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try and correct the interference by one or more of the following measures:
• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

To comply with the FCC’s RF exposure limits for general population / uncontrolled exposure, this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter.

CAUTION: Changes or modifications to this equipment not expressly approved by RAB Lighting may void the user’s authority to operate this equipment.
Lightcloud is a commercial wireless lighting control system & service. It’s powerful and flexible, yet easy to use and install. Learn more at lightcloud.com

1 (844) LIGHTCLOUD
1 (844) 544-4825
support@lightcloud.com
Input: 120-277VAC, 50/60Hz

Switching Capacity (Magnetic, Electronic Ballast or LED)
15.5A (120-277VAC)
277VAC: 20A Magnetic/Resistive
240VAC: 5A Tungsten/Electronic, 20A FLA/60 LRA, 2HP
120VAC: 15A Tungsten, 1HP

Switched Neutral: The “Switched Neutral” white with red stripe wire is the neutral line for the load being switched. This enables power measurement.

Any wires not in use must be capped off or otherwise insulated.
This product should only be installed by a qualified electrician and in compliance with local and national electrical codes.
Lightcloud Controller 0-10V Dimming

Lightcloud Controller used to switch a load with 0-10V dimming.

Input: 120-277VAC, 50/60Hz
Purple: 0-10V positive
Grey: 0-10V common

Switching Capacity (Magnetic, Electronic Ballast or LED)
15.5A (120-277VAC)
277VAC: 20A Magnetic/Resistive
240VAC: 5A Tungsten/Electronic, 20A FLA/60 LRA, 2HP
120VAC: 15A Tungsten, 1HP

Switched Neutral: The “Switched Neutral” white with red stripe wire is the neutral line for the load being switched. This enables power measurement.

Note: The National Electrical Code requires that low-voltage wiring use in the same enclosure as high-voltage wiring have an equal or better insulation rating. You may need to complete your low-voltage wiring in another enclosure or use a partition.

Any wires not in use must be capped off or otherwise insulated. This product should only be installed by a qualified electrician and in compliance with local and national electrical codes.
Lightcloud Controller Repeater

Lightcloud Controller used to repeat Lightcloud mesh network signal without controlling a load.

Input: 120-277VAC, 50/60Hz

Any wires not in use must be capped off or otherwise insulated. This product should only be installed by a qualified electrician and in compliance with local and national electrical codes.
Lightcloud Advanced Trigger Wiring

Lightcloud Controllers can receive inputs or triggers from 3rd party switching devices such as outdoor motion or light sensors.

Sample Occupancy Sensor
RAB Stealth STL200

Notes: A resistor or second fixture driver must be used between the Controller and Sensor. RESLC/120 for 120VAC applications or RESLC/277 for 277VAC application. The driver must be greater than 10mA.

Any wires not in use must be capped off or otherwise insulated. This product should only be installed by a qualified electrician and in compliance with local and national electrical codes.
Lightcloud Emergency Lighting

Lightcloud Controllers can be used to control Emergency Lighting fed with “Always ON” Emergency Power. Upon loss of power, Emergency lighting will fail to “Full ON” light output.

Notes: In spaces where there is only one luminaire, and it is connected to emergency power, the Controller will need to be connected to a Normal Power Circuit for proper operation. Emergency fixtures with on-board battery backup don’t require special wiring.

Any wires not in use must be capped off or otherwise insulated.
This product should only be installed by a qualified electrician and in compliance with local and national electrical codes.
Any wires not in use must be capped off or otherwise insulated. This product should only be installed by a qualified electrician and in compliance with local and national electrical codes.

Lightcloud Controllers can be used to control Emergency Lighting fed with “Always ON” Emergency Power. Upon loss of power, Emergency lighting will fail to “Full ON” light output.

Notes: In spaces where there is only one luminaire, and it is connected to emergency power, the Controller will need to be connected to a Normal Power Circuit for proper operation. Emergency fixtures with on-board battery backup don’t require special wiring.
Lightcloud Emergency Shunt On/Off

Lightcloud Controller emergency fixture wiring with LCShunt for on/off operation.

Note: The LCShunt includes a 20A rated high voltage Form C (N/O+N/C) relay and is UL924 Listed for emergency lighting control applications. The LCShunt can bypass a line voltage switch or dimmer, ensuring that an emergency fixture illuminates at full brightness during a utility power interruption.

Any wires not in use must be capped off or otherwise insulated. This product should only be installed by a qualified electrician and in compliance with local and national electrical codes.
Lightcloud Emergency Shunt Dimming

Lightcloud Controller emergency fixture wiring with LCShunt/D10 for on/off and 0-10V dimmable operation.

Note: The LCShunt includes a 20A rated high voltage Form C (N/O+N/C) relay and a low voltage Form A (N/O) relay and is UL924 Listed for emergency lighting control applications. The LCShunt can simultaneously bypass both a line voltage switch and a 0-10V dimming signal, ensuring that an emergency fixture illuminates at full brightness during a utility power interruption.

Any wires not in use must be capped off or otherwise insulated. This product should only be installed by a qualified electrician and in compliance with local and national electrical codes.
Lightcloud Phase Dimming <450W

Lightcloud Controllers can dim phase loads using a phase dimming adapter. For loads under 450W @ 120V and 1000W @ 277V, we recommend the Ecosense Ecospec adapter.

**Phase Dimmer**  
Ecosense Ecospec Linear Dimming Control Module  
450W MAX @ 120V  
1000W MAX @ 277VD

Any wires not in use must be capped off or otherwise insulated. This product should only be installed by a qualified electrician and in compliance with local and national electrical codes.
Lightcloud Phase Dimming 450-1800W

Lightcloud Controllers can dim phase loads using a phase dimming adapter. For loads between 450 and 1800W, we recommend the Lutron PHPM-PA-120-WH Phase Dimmer and BCI-0-10 Ballast Control Interface.

**Phase Dimmer**
Lutron PHPM-PA-120-WH
120 V @ 16 A

**Ballast Control Interface**
Lutron BCI-0-10
Control Input Voltage: 0–10 V-
Control Input Current: Source 500 µA
Compatible Voltage: 120–277 V~ 50/60 Hz

Any wires not in use must be capped off or otherwise insulated. This product should only be installed by a qualified electrician and in compliance with local and national electrical codes.
Lightcloud Plug Load Control

Lightcloud Controllers can control electrical outlets using a contactor.

Any wires not in use must be capped off or otherwise insulated. This product should only be installed by a qualified electrician and in compliance with local and national electrical codes.
Hello

## What You Need

Lightcloud Gateway  
A Lightcloud installation requires at least one Lightcloud Gateway to manage your devices.

**WE’RE HERE TO HELP:**  
1 (844) LIGHTCLOUD  
1 (844) 544-4825  
support@lightcloud.com
Setup & Installation

① Turn off power

⚠️ WARNING

1a Find a Suitable Location

Use these guidelines when installing devices:
• If there is a clear line of sight between a Luminaire Controller and another Lightcloud device they can be placed up to 700 feet apart.
• If a Luminaire Controller and another Lightcloud device are separated by ordinary drywall construction, try to keep them within 70 ft. of each other.
• Brick, concrete and steel construction may require additional Lightcloud devices to go around the obstruction.
Setup & Installation (cont’d)

2 Install the Luminaire Controller

For luminaires pre-installed with the Luminaire Controller, skip to Step 3.

2a Fixture Installation with Actuator Module Inside

If the interior of your luminaire can accommodate the dimensions of the actuator module, install the actuator module inside the housing, and attach the radio module to the outside of the housing via a knockout.
2b Installation with Junction Box

If the interior of your luminaire cannot accommodate the actuator module, the Luminaire Controller can be mounted into a junction box, with the radio module always outside any metal enclosure.

3 Install Luminaire

Install the luminaire with integrated Luminaire Controller as normal, allowing for any room to accommodate the external radio module of the LCLC3/D10.
Setup & Installation (cont’d)

4 Labeling your device

When installing devices, it’s important to keep track of their Device IDs, installation locations, panel/circuit #s, dimming function, and any additional notes. To organize this information, use the Lightcloud Installer Application (A) or Device Table (B).

4a Lightcloud Installer Application

Install the LC Installer Application:
LC Installer is available for iOS and Android.

Scan & Install Lightcloud Devices:
Scan each device and assign to a room. It’s recommended that each device is scanned just before or just after being wired so no devices are missed. The more notes that are given, the easier it is to commission the system.

Send to RAB:
Once all of the devices have been added and organized, submit the information for commissioning.
Setup & Installation (cont’d)

4b Device Table

Two Lightcloud Device Tables are provided with each Gateway: one that you can attach to your panel and one to hand off to a building manager. Attach the Device Identification stickers included with each device to a row, then write in additional information, such as Zone name, Panel/Circuit Number, and whether or not a Zone uses dimming.

<table>
<thead>
<tr>
<th>DEVICE ID</th>
<th>ZONE NAME</th>
<th>PANEL/CIRCUIT #</th>
<th>DIMMING</th>
</tr>

<tbody>
<tr>
<td>0013A200 40862A4A</td>
<td>Front Desk</td>
<td>2</td>
<td>✓</td>
</tr>
</tbody>
</table>

5 Power up

To add devices to your Lightcloud network, call RAB at 1 (844) LIGHTCLOUD, or email us at support@lightcloud.com
6 Confirm device connectivity
Confirm Status Indicator is Solid Green (see details below)

- **DEVICE IDENTIFICATION BUTTON**
  - Press once to highlight this device in the Lightcloud Application
  - Press twice to toggle circuit on and off
  - Press twice and hold to set dim level
  - Press and hold for 10 seconds to remove this device from a Lightcloud network

- **POWER**
  - Lit when device is on

- **STATUS INDICATOR**
  - Solid GREEN when connected to your Lightcloud network. Blinking RED when not connected. The device will automatically continue trying to connect to a network in Setup Mode.

- **SIGNAL INDICATOR**
  - Illuminates when the device receives a message and indicates the strength of the signal by number of blinks:
  - 3 - Best signal
  - 2 - Acceptable signal
  - 1 - Unacceptable signal
  - Consult the “Finding a Location” section for more information

7 Commission your devices
Log on to [www.lightcloud.com](http://www.lightcloud.com) or call 1 (844) LIGHTCLOUD
Functionality

Configuration

All configuration of Lightcloud products may be performed using the Lightcloud web Application, or by calling RAB.

WE'RE HERE TO HELP:
1 (844) LIGHTCLOUD
1 (844) 544-4825
support@lightcloud.com

Power Measurement

The Lightcloud Luminaire Controller is capable of measuring the power usage of the attached luminaire. In order to utilize this function, the neutral wire of the load must be connected to the white-red neutral wire. If the white-red neutral line cannot be used, it should be tied to the regular neutral wires (i.e. all neutral wires joined).

Power Loss Detection

If mains power to the Controller is lost, the device will detect this and alert the Lightcloud Application.

Emergency Default

If communication is lost, the Controller may optionally fall back to a specific state, such as turning the attached luminaire on.

[ Warning: Any wires not in use must be capped off or otherwise insulated. ]
FCC Information:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: 1. This device may not cause harmful interference, and 2. This device must accept any interference received, including interference that may cause undesired operation.

Note: This device has been tested and found to comply with the limits for Class B digital devices pursuant to Part 15 Subpart B, of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential environment. This equipment generates, uses, and can radiate radio frequency energy, and if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment of and on, the user is encouraged to try and correct the interference by one or more of the following measures:
• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

To comply with the FCC’s RF exposure limits for general population / uncontrolled exposure, this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter.

- No Batteries
- Patent Pending

FCC Information:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

Note: This device has been tested and found to comply with the limits for Class B digital devices pursuant to Part 15 Subpart B, of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential environment. This equipment generates, uses, and can radiate radio frequency energy, and if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try and correct the interference by one or more of the following measures:
- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

To comply with FCC RF exposure limits for general population/uncontrolled exposure, this transmitter must be installed to provide a separation distance of at least 20cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter.

CAUTION: Changes or modifications to this equipment not expressly approved by RAB Lighting, Inc. may void the user’s authority to operate this equipment.

Lightcloud Controller
(Or similar Lightcloud actuation device)
The Daylight is designed to remotely control one or more Lightcloud devices that are capable of switching or dimming, such as the Lightcloud Controller or Ceiling Sensor.
Setup & Installation

1. Plug in the Daylight device (setup only)
   To join your Daylight to a Lightcloud network, plug it in with the included Micro USB power adapter. The white Power Indicator will come on and the Device Status Indicator will blink red every 10 seconds until it is joined to your network. For setup purposes, you can plug the device in anywhere that’s convenient, but please stay near the location where it will be permanently installed in order to ensure continued network connectivity. Once setup has been completed, you can unplug the device and it will operate exclusively on solar power—no batteries necessary.

2. Contact RAB to add your Daylight
   Call us at 1(844) LIGHTCLOUD or email support@lightcloud.com and we’ll get your Daylight device added to your Lightcloud network immediately. When USB power is removed, it is normal for this LED to be unlit.
Setup & Installation (cont’d)

3 Find a Suitable Location

3a The Daylight needs sunlight to operate, and must be within range of another Lightcloud device. Direct sunlight is ideal, but indirect sunlight may be acceptable if there’s enough of it.

3b A skylight is a great location for the Lightcloud Daylight. Be aware of where shadows will land throughout the day and position the device where it will receive the most direct sunlight.

NOTE: Remember, south-facing surfaces usually receive more direct sunlight than north-facing surfaces.
Setup & Installation (cont’d)

3c The Daylight includes an angled mounting bracket that can be used to maximize the amount of sunlight landing on the device’s face.

3d In some cases, you may want to use an extension of some kind (not included) to mount the device from the ceiling. Just be sure it ends up in direct sunlight as much as possible.

The Daylight must be within range of a Lightcloud device or Gateway. See “Finding a Location”

The Daylight will not act as a “repeater” to extend the range of your Lightcloud network. If you need to extend your network range, use a Lightcloud Controller or other AC-powered device.
Setup & Installation (cont’d)

4 Install

4a Screw the straight or angled mounting bracket to the mounting surface.

4b Snap the Daylight onto the mounting bracket.

5 Configure

Login at lightcloud.com and click on Devices to associate a zone at your site. The application will show the last measured light level so you can configure actions to take at different levels. Or, simply call or email us:

1 (844) LIGHTCLOUD
1 (844) 544-4825
support@lightcloud.com
Functionality

Overview

**DEVICE STATUS INDICATOR:**
- **Unlit:** When not powered by USB, indicates that the device is joined to a Lightcloud network and is operating normally
- **Solid green:** When powered by USB, indicates that the device is joined to a Lightcloud network
- **Green blink:** After pressing the Device Button, indicates that a light level measurement has been transmitted
- **Single red blink every 10 seconds:** Not joined to a Lightcloud network
- **Green/Red alternating:** Resetting to factory defaults

**USB POWER INDICATOR:**
- **White:** Powered by USB

**DEVICE BUTTON:**
- **Press:** Indicate in Lightcloud application and measure light level
- **Hold for 10 seconds while USB powered:** Force device to leave current Lightcloud network
- **Hold for 10 seconds while connecting USB power:** Reset to factory defaults and leave current network

**DAYLIGHT HARVESTING:**
Daylight Harvesting is the use of daylight to offset the use of electric lighting to light a space. If there’s enough daylight in a space, the Lightcloud Daylight can make sure the lights are turned down or off, and turn them back on when the sun goes down.

The Lightcloud Daylight automatically takes light level measurements every 10 minutes. Pressing the Device Button will make an immediate measurement. Call or email RAB, or log in to lightcloud.com to configure actions to take at different light levels, such as turning off a zone when the light level exceeds 50 foot-candles.
Welcome

Lightcloud is a commercial wireless lighting control system & service. It’s powerful and flexible, yet easy to use and install. Learn more at lightcloud.com

1 (844) LIGHTCLOUD
1 (844) 544-4825
Lightcloud is a wireless lighting control service. The Lightcloud Dimmer is an in-wall switch that connects wirelessly to a Lightcloud Controller to provide switching, dimming and scene control.

**Product Features**

- Wireless Control & Configuration
- Zone Switching & Dimming
- Dim Level Indicator
- Scene Selection
- Nightlight
### Contents

- Dimmer
- Faceplate
- Faceplate Bracket
- Instruction Manual
- 2x 6-32 1/2” Screws
- 2x 6-32 5/16” Screws

### Specifications

**PART NUMBER**
LCDIMMER/W

**INPUT**
120-277VAC, 50/60Hz, 2W

**OPERATING TEMPERATURE**
0°C to 40°C

**DIMENSIONS**
- Dimmer: 1.77”W x 2.7”H x 1.49”D
- Faceplate: 2.94”W x 4.69”H x 0.06”D
- Faceplate Bracket: 2.8”W x 4.55”H x 0.13”D

18AWG grounding; terminals supporting up to 12AWG wire

**WIRELESS RANGE**
- Line-of-Sight: 1000 feet
- Obstructions: 100 feet
What You Need

A Lightcloud Gateway

A Ceiling Sensor (Or similar actuator)

Wiring

CAUTION
- Use only copper wire.
- Do not operate with the faceplate removed.
- This product should only be installed by a qualified electrician and in compliance with local and national electrical codes.
- This product should only be installed in a UL-approved single gang wall-box enclosure.
- Indoor use only.

WE’RE HERE TO HELP:
1 (844) LIGHTCLOUD
or 1 (844) 544-4825
Finding a suitable location
Lightcloud uses a wireless mesh network to connect devices such as the Dimmer to the Gateway. Unlike a WiFi router, each Lightcloud device may connect another device to the network. If there is a clear line of sight between two Lightcloud devices, they can be placed up to 1000 feet apart. If the two devices are separated by ordinary drywall construction, try to keep them within 100 feet of each other. Brick, concrete and steel construction may require additional AC-powered Lightcloud devices to go around the obstruction. See the Deployment section of your Gateway for more information.
Install the Lightcloud Dimmer

2a Screw the line (black) and neutral (white) wires into the labeled connectors on the back of the Dimmer. Connect the ground wire (green).

2b Use the two 6-32 1/2” Phillips round head screws to secure the Dimmer to the junction box.

Make sure the arrow labeled “TOP” is pointing up.
Setup & Installation (cont’d)

2 Install the Lightcloud Dimmer (cont’d)

2c Use the two 6-32 5/16” Phillips flat-head screws provided to secure the faceplate bracket to the Dimmer.

2d Snap the faceplate onto the faceplate bracket.
Setup & Installation (cont’d)

3 Labeling your device

For setup and maintenance, we provide two Lightcloud Device Tables with the Gateway: one that you can attach to your panel and one to hand off to a building manager. Attach the Device Identification stickers included with each device to a row, then write in additional information, such as Zone name, Panel/Circuit Number, and whether or not a zone uses dimming.

4 Power up

To add your Lightcloud Dimmer to your system, enable Setup Mode via the Lightcloud application or call RAB at 1 (844) 544-4825. When the Dimmer powers up, it will automatically try to join, and keep trying until it is able to join.

If you are installing multiple devices, you may wait until they are all installed to enable Setup Mode.

When all devices have been commissioned, remember to disable Setup Mode.

5 Confirm device connectivity

Confirm Network Status Indicator is solid green (see details below).
Functionality

Configuration
To pair the Dimmer with a zone, assign scenes or perform other configuration, use the Lightcloud web application or call RAB:

WE'RE HERE TO HELP:
1 (844) LIGHTCLOUD
or 1 (844) 544-4825

Overview

DEVICE BUTTON (press using paperclip):
- Single press: Indicate in Lightcloud application
- Hold for 10 seconds: Force device to leave current Lightcloud network

DIM LEVEL INDICATOR:
- Displays current dim level (Zone mode)

NIGHTLIGHT:
- White: Lit when zone is off so you can find the dimmer

SIGNAL STRENGTH INDICATOR:
- Indicates strength of the connection to next Lightcloud Device

NETWORK INDICATOR:
- Solid green: Connected to a Lightcloud network
- Blinking red: Not connected to a Lightcloud network

The network and signal strength indicators are lit for 10 minutes following initial power on. To display the indicators later on, simply press the device button once.

TOP AND BOTTOM BUTTONS:
Functionality depends on which mode is being used; see next page for details.
Functionality (cont’d)

Features
The Lightcloud Dimmer can be used in Switch Mode, Dimmer Mode or Scene Mode. To switch between these modes and access other configuration options, use the Lightcloud web application, or call RAB at 1-844-LIGHTCLOUD.

SWITCH MODE: In Switch Mode, the Dimmer is paired with a specific zone to provide switching.
Top and Bottom Buttons:
• Single Press: Switch zone on/off

DIMMER MODE: Dimmer Mode takes Switch Mode and adds dimming capabilities.
Top Button:
• Single press while zone is off: switch zone on.
• Single press while zone is on: dim up to max gradually, stopping at current position if bottom button is pressed.
• Press and hold while zone is on: dim up gradually, release to set dim level.

Bottom Button:
• Single press while zone is on: switch zone off.
• Press and hold while zone is on: dim down gradually, release to set dim level.

SCENE MODE: In Scene Mode, the top and bottom buttons activate preselected scenes. This can be configured using the Lightcloud web application or by calling RAB.

FCC Information:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

Note: This device has been tested and found to comply with the limits for Class B digital devices pursuant to Part 15 Subpart B, of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential environment. This equipment generates, uses, and can radiate radio frequency energy, and if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try and correct the interference by one or more of the following measures:
• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

To comply with FCC RF exposure limits for general population/uncontrolled exposure, this transmitter must be installed to provide a separation distance of at least 20cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter.

CAUTION: Changes or modifications to this equipment not expressly approved by RAB Lighting, Inc. may void the user’s authority to operate this equipment. Custom manufactured in China.
Device Specifications

PART NUMBER
LCGATEWAY

ELECTRICAL
The Lightcloud Gateway is designed to be hard-wired to AC power by a qualified electrician.

INPUT
120-277 VAC, 50/60 Hz
60-45mA

BATTERY
Li-ion battery. Contact RAB only for replacement batteries.
CAUTION! RISK OF EXPLOSION IF BATTERY IS REPLACED BY AN INCORRECT TYPE. DISPOSE OF USED BATTERIES ACCORDING TO LOCAL LAWS.
Some communities offer recycling or collection of rechargeable batteries—contact your local government for disposal practices in your area.

DISCONNECT
An external readily accessible disconnect device, such as a circuit breaker, is required.

Custom manufactured in China
Copyright © 2016 RAB Lighting, Inc.
Welcome to lighting control that just works.

Lightcloud is a cloud-based wireless lighting control system that makes it easy to take charge of your lighting—from sensing to dimming, schedules to scenes, and everything in between. Control and configure your system remotely using the Lightcloud Application, or call RAB to have our experts set up your system just how you need it.
System Overview

An individual Lightcloud installation, or Site, requires at least one Lightcloud Gateway depending on the environment and usage. Your Lightcloud devices communicate with each other and the Gateway via a wireless mesh network, which allows site layout to be flexible and robust.

The Lightcloud Gateway and Devices require a subscription to function beyond the installation period. Call RAB at 1 (844) LIGHTCLOUD or visit lightcloud.com to set up your account. Your Lightcloud subscription gets you these state-of-the-art features:

- Online control & configuration at control.lightcloud.com
- Device commissioning
- Free support
- Telephone concierge
- Energy monitoring
Lightcloud Gateway

The Gateway connects your system to our secure, private server via a cellular signal, so you don’t have to worry about providing your own internet connection. With the Gateway powered and connected, your Lightcloud site is at your command with the Lightcloud Application. For maximum security, the Gateway isn’t exposed to the internet at all, and for maximum reliability, the Gateway contains an Uninterruptible Power Supply (UPS) that will maintain power for up to 2 hours. When the Gateway is not powered or available, switching devices such as the Controller will fall back to a configurable emergency mode, such as turning on to full brightness.
Lightcloud Devices

LIGHTCLOUD DEVICES THAT CONNECT TO THE GATEWAY

Lightcloud Controller

The Controller switches circuits up to 20A as well as provides a 0-10V dimming interface for dimmable drivers and ballasts.

Lightcloud Ceiling Sensor

The Ceiling Sensor is an intelligent passive infrared motion sensor that can be configured for both occupancy and vacancy sensing. Switches up to 15A and provides 0-10V dimming.

Lightcloud Daylight

The Daylight is an innovative, self-powered daylight harvesting sensor that measures available light and adjusts your lighting automatically.

Lightcloud Dimmer

The Wall Dimmer puts advanced control at your fingertip. Configure via the Lightcloud App to switch & dim a zone or change scenes.

Learn more about Lightcloud Devices at lightcloud.com
Finding a Suitable Location

The Gateway should be installed in a dry or non-condensing damp environment only.

Use these guidelines when installing additional Lightcloud devices:

- If there is a clear line of sight between two devices, they can be placed up to 1000 feet apart.
- If the two devices are separated by ordinary drywall construction, try to keep them within 100 feet of each other.
- Brick, concrete and steel construction may require additional devices to go around the obstruction.
Best Practices

Unlike an ordinary WiFi router, where all devices must be within range of the router, hardwired Lightcloud devices extend the range of the network—so as long as each device is within range of another, you’ll have a strong, reliable system.

NOTE: Lightcloud Daylight devices do not extend the range of a Lightcloud network.

PROBLEM MATERIALS

METAL  CONCRETE  BRICK

Large amounts of metal, concrete and brick are bad news for radio signals; in some cases, you’ll have to go around these obstacles with additional AC-powered Lightcloud devices.
Best Practices (Continued)

Lastly, consider sources of invisible interference. Avoid placing Lightcloud devices near microwaves, motors (especially elevator mechanical rooms) or any other radio amplifiers and antennas.

PROBLEM DEVICES & SIGNALS

- MICROWAVES
- ELEVATOR MECHANICAL ROOMS
- AMPLIFIERS & ANTENNAS
Getting Started

**INSIDE YOUR GATEWAY**

- 2x Wire Nuts
- 2x Mounting Screws
- 4x Device ID Labels
- 1x Power Cable*

**ACTIVATION STEPS**

**GATEWAY**

**DEVICE TABLE**

**MANUAL**

*The Lightcloud Gateway must be mains powered for permanent installation. Power cord including for testing cellular signal strength at different locations in a facility.
Installation

The Lightcloud Gateway is rated 120-277VAC and contains an integral junction box for hard-wired installation by a qualified electrician.

LED Indicators

POWER
Green: Fully powered

CELLULAR
Off: No or poor cellular signal. You must move the Gateway to a location with better cellular signal.
Solid Yellow: Adequate cellular signal. This signal strength works for most applications, but if possible, move to a location with better signal.
Solid Green: Good cellular signal.

SYSTEM STATUS
Blinking Yellow: Initializing
Solid Yellow: Error: Cannot reach Lightcloud service. Check Cellular Signal Strength and call RAB for technical support.
Blinking Green: Ready to connect with new Lightcloud devices
Solid Green: Normal operation
Installing the Lightcloud Gateway

Follow instructions and steps to successfully install your Gateway.

1. **STEP ONE**

   Choose a location with good cellular signal. Check your phone’s signal for reference.

   **NOTE:** Locations with significant concrete and brick construction, or underground locations, are not recommended. Do not install inside metal enclosures.

2. **STEP TWO**

   Turn off the breaker and prepare the circuit you’ll use to power the Gateway. A dedicated circuit is recommended.

3. **STEP THREE**

   Remove a knockout (KO) from the Gateway using a flat-blade screwdriver and hammer. Place the screwdriver blade at the edge of the KO, then tap the screwdriver with the hammer to weaken the attachment. Work your way around the edge of the KO until it breaks away.
4 **STEP FOUR**

Mount the Gateway to the installation surface using size 10 screws appropriate for the surface material. For direct installation onto an external junction box, use the junction box’s included screws.

**NOTE:** Conduit must be used to connect to side knockouts.

5 **STEP FIVE**

Install included battery with negative (-) end facing towards junction box area. Call RAB to request replacement rechargeable batteries. Use RAB-provided batteries only.

6 **STEP SIX**

Connect hot and neutral wires with included wire nuts.

Turn breaker back on.
Installing Lightcloud Gateway (Continued)

7  STEP SEVEN

Turn on the Gateway main power switch. Replace outer cover and use included screws to secure.

When all devices are installed and powered, you’re ready to call RAB to activate and verify your system, and complete your site’s configuration.

NOTE: Use only RAB-authorized parts.

8  STEP EIGHT

Confirm that the cellular signal strength LED is yellow or green. If the Gateway is powered but this LED is not lit, relocate the Gateway to an area with better reception.

You can use the included power cable to easily test the signal strength in a few locations, but remember that the Gateway must be hardwired for permanent installation.

9  STEP NINE

Place extra Device ID stickers on your Lightcloud Device Table (see page 18) for future reference.

For each device, find the number from the panel board and write it down on the Device Table.
Lightcloud Devices

Lightcloud devices that are mains hard-wired powered are designed to be installed on a junction box or similar enclosure, and must be installed by a qualified electrician. Refer to your device’s manual for installation considerations and best practices.

Lightcloud Device Table

The Device Table is essential for referencing during setup or for troubleshooting—don’t forget it! Two copies are provided: one to keep near your Gateway, and one for the building owner or facility manager to file.

**TIP:** Use extra Device ID stickers on or near your devices or circuits for easier identification.

### IN THE BOX

![Device Table Image]

### MOUNT IT

Mount device table to breaker box.

### HOW TO USE IT

Place Gateway ID sticker at the top.

**GATEWAY ID:** 0013A20040B62A4A

**PWR/ENGY:** if a zone uses the Controller’s integrated power monitoring, place a checkmark.

**DIM:** if a zone uses the Controller’s 0-10V dimming wires, place a checkmark here.
Gateway Activation
When you power your Gateway and it shows sufficient cellular signal (solid yellow or green LED), call 1 (844) LIGHTCLOUD or 1 (844) 544-4825 to activate it and complete the rest of your site setup.

Network Setup
To add new devices to your Lightcloud network, call RAB at 1 (844) LIGHTCLOUD.

Software Setup
Lightcloud is cloud-based—no software to install or maintain, ever. Once you have a Lightcloud account, you can login to lightcloud.com at any time to configure and control your system.

Full Service
Need to change something about your system? No need to log in—RAB can do it for you! Call 1 (844) LIGHTCLOUD and our support specialists will get you where you want to be.
FCC Information:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

Note: This device has been tested and found to comply with the limits for Class B digital devices pursuant to Part 15 Subpart B, of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential environment. This equipment generates, uses, and can radiate radio frequency energy, and if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try and correct the interference by one or more of the following measures:
- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
To comply with the FCC’s RF exposure limits for general population / uncontrolled exposure, this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter.
CAUTION: Changes or modifications to this equipment not expressly approved by RAB Lighting may void the user’s authority to operate this equipment.

What You Need

Lightcloud Gateway
A Lightcloud installation requires at least one Lightcloud Gateway to manage your devices.

WE’RE HERE TO HELP:
1 (844) LIGHTCLOUD
1 (844) 544-4825
support@lightcloud.com
Setup & Installation

1. Turn off power

WARNING

1a. Find a Suitable Location

Use these guidelines when installing devices:

- If there is a clear line of sight between a Luminaire Controller and another Lightcloud device they can be placed up to 700 feet apart.
- If a Luminaire Controller and another Lightcloud device are separated by ordinary drywall construction, try to keep them within 70 ft. of each other.
- Brick, concrete and steel construction may require additional Lightcloud devices to go around the obstruction.
Setup & Installation (cont’d)

2 Install the Luminaire Controller
   For luminaires pre-installed with the Luminaire Controller, skip to Step 3.

2a Fixture Installation with Actuator Module Inside

If the interior of your luminaire can accommodate the dimensions of the actuator module, install the actuator module inside the housing, and attach the radio module to the outside of the housing via a knockout.
2b  Installation with Junction Box

If the interior of your luminaire cannot accommodate the actuator module, the Luminaire Controller can be mounted into a junction box, with the radio module always outside any metal enclosure.

3  Install Luminaire

Install the luminaire with integrated Luminaire Controller as normal, allowing for any room to accommodate the external radio module of the LCLC3/D10.
Setup & Installation (cont’d)

4 Labeling your device

When installing devices, it’s important to keep track of their Device IDs, installation locations, panel/circuit #s, dimming function, and any additional notes. To organize this information, use the Lightcloud Installer Application (A) or Device Table (B).

4a Lightcloud Installer Application

Install the LC Installer Application:
LC Installer is available for iOS and Android.

Scan & Install Lightcloud Devices:
Scan each device and assign to a room. It’s recommended that each device is scanned just before or just after being wired so no devices are missed. The more notes that are given, the easier it is to commission the system.

Send to RAB:
Once all of the devices have been added and organized, submit the information for commissioning.
Setup & Installation (cont’d)

**4b** Device Table

Two Lightcloud Device Tables are provided with each Gateway: one that you can attach to your panel and one to hand off to a building manager. Attach the Device Identification stickers included with each device to a row, then write in additional information, such as Zone name, Panel/Circuit Number, and whether or not a Zone uses dimming.

<table>
<thead>
<tr>
<th>DEVICE ID</th>
<th>ZONE NAME</th>
<th>PANEL/CIRCUIT #</th>
<th>DIMMING</th>
</tr>
</thead>
<tbody>
<tr>
<td>0013A200 40B62A4A</td>
<td>Front Desk</td>
<td>2</td>
<td>✓</td>
</tr>
</tbody>
</table>

**5** Power up

To add devices to your Lightcloud network, call RAB at 1 (844) LIGHTCLOUD, or email us at support@lightcloud.com
6 Confirm device connectivity

Confirm Status Indicator is Solid Green (see details below)

DEVICE IDENTIFICATION

- **BUTTON**
  - Press once to highlight this device in the Lightcloud Application
  - Press twice to toggle circuit on and off
  - Press twice and hold to set dim level
  - Press and hold for 10 seconds to remove this device from a Lightcloud network

POWER

- Lit when device is on

STATUS INDICATOR

Solid GREEN when connected to your Lightcloud network. Blinking RED when not connected. The device will automatically continue trying to connect to a network in Setup Mode.

SIGNAL INDICATOR

Illuminates when the device receives a message and indicates the strength of the signal by number of blinks:
- 3 - Best signal
- 2 - Acceptable signal
- 1 - Unacceptable signal

Consult the “Finding a Location” section for more information

7 Commission your devices

Log on to www.lightcloud.com or call 1 (844) LIGHTCLOUD
Functionality

Configuration

All configuration of Lightcloud products may be performed using the Lightcloud web Application, or by calling RAB.

WE'RE HERE TO HELP:
1 (844) LIGHTCLOUD

support@lightcloud.com

Power Measurement

The Lightcloud Luminaire Controller is capable of measuring the power usage of the attached luminaire. In order to utilize this function, the neutral wire of the load must be connected to the white-red neutral wire. If the white-red neutral line cannot be used, it should be tied to the regular neutral wires (i.e. all neutral wires joined).

Power Loss Detection

If mains power to the Controller is lost, the device will detect this and alert the Lightcloud Application.

Emergency Default

If communication is lost, the Controller may optionally fall back to a specific state, such as turning the attached luminaire on.

[ Warning: Any wires not in use must be capped off or otherwise insulated. ]
FCC Information:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: 1. This device may not cause harmful interference, and 2. This device must accept any interference received, including interference that may cause undesired operation.

Note: This device has been tested and found to comply with the limits for Class B digital devices pursuant to Part 15 Subpart B, of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential environment. This equipment generates, uses, and can radiate radio frequency energy, and if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment of and on, the user is encouraged to try and correct the interference by one or more of the following measures:
• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

To comply with the FCC’s RF exposure limits for general population / uncontrolled exposure, this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter.

CAUTION: Changes or modifications to this equipment not expressly approved by RAB Lighting may void the user's authority to operate this equipment.
It’s powerful and flexible, yet easy to use and install. Learn more at lightcloud.com

1 (844) LIGHTCLOUD
1 (844) 544-4825
support@lightcloud.com
Lightcloud is a wireless lighting control service. The Lightcloud Sensor is a remotely configurable passive infrared motion sensor that can switch and dim both hardwired circuits and remote circuits using Lightcloud Controllers.

Product Features
- Advanced PIR Sensing
- Secure Cloud Control & Configuration
- Retrofit-Friendly Local Control
- Scheduling & Astronomical Clock
- Temperature Monitoring
- Light Sensor
- Power Monitoring
- 0-10V Dimming

Patent Pending

Lightcloud Ceiling Sensor or High Bay Sensor

Wire Nuts

Instruction Manual

Accessories

For use with High Bay Sensor Only

Lens Cover for 180° Coverage (included)

Arm (optional, includes 2 screws and 1 locknut)

Height Adjuster (optional, must use in conjunction with Arm)

Specifications

Indoor Damp Location

PART NUMBER
LCSENSE15/D10 (Ceiling)
LCHBSENSE15/D10 (High Bay)

INPUT
120-277VAC, 50/60Hz,
<1W (Standby) - 2W (Active)

MAXIMUM SWITCHED LOAD RATINGS
Electronic Ballast: 277VAC, 3300W
Magnetic Ballast: 277VAC, 1200W / 120VAC, 800W
Tungsten: 220VAC, 3000W
Dimming: 0-10V (Class2)

OPERATING TEMPERATURE
-20ºC to 40ºC

OVERALL DIMENSIONS
4.91” Diameter, 1.61” Height

WIRELESS RANGE
Line-of-Sight: 1000 feet
Obstructions: 100 feet

OPERATING HUMIDITY
10% RH to 95% RH
Non-Condensing

What You Need

Lightcloud Gateway
A Lightcloud installation requires at least one Lightcloud Gateway to manage your devices.

What You Need

Lightcloud Gateway
A Lightcloud installation requires at least one Lightcloud Gateway to manage your devices.
Setup & Installation

1. Find a suitable location

Use these guidelines when installing devices:

- If there is a clear line of sight between two Lightcloud devices, they can be placed up to 1000 feet apart.
- If the two devices are separated by ordinary drywall construction, try to keep them within 100 feet of each other.
- Brick, concrete and steel construction may require additional Lightcloud devices to go around the obstruction.

2. Install your Lightcloud Sensor

INSTALL AT A JUNCTION BOX (INDOOR/OUTDOOR)

The Sensor can control other Lightcloud devices, wirelessly. If you don’t need to hard-wire a switched circuit to the Sensor, no problem—just tie the white/red wire to neutral and cap off any unused wires.
Setup & Installation (cont’d)

3 Installing Accessories (High Bay only)

Arm:
mount sensor to fixture using ½” NPS threaded nipple

Height Adjuster:
adjust height by loosening set screw, moving sensor up or down along extruded tube, then tightening set screw. Ensure sensor lens is not blocked by any part of the fixture.

4 Wiring

SWITCHED NEUTRAL

The “Switched Neutral” white with red stripe wire is the neutral line for the load being switched. This enables power measurement. See the Power Measurement section under “Functionality” for more information.

Any wires not in use must be capped off or otherwise insulated.
This product should only be installed by a qualified electrician and in compliance with local and national electrical codes.
5. Labeling your device

For setup and maintenance, we provide two Lightcloud Device Tables with the Gateway: one that you can attach to your panel and one to hand off to a building manager. Attach the Device Identification stickers included with each device to a row, then write in additional information, such as Zone name, Panel/Circuit Number, and whether or not a zone uses dimming.

6. Power up

To add new devices to your Lightcloud network, contact RAB:

1 (844) LIGHTCLOUD
or 1 (844) 544-4825
support@lightcloud.com

WE’RE HERE TO HELP:

7. Confirm device connectivity

Confirm status indicator LED (see step 8) is solid green. If it is not, make sure your device is within range of another Lightcloud AC-powered device.
Setup & Installation (cont’d)

8 Place cover
Secure cover onto sensor by pushing up and twisting to the right (clockwise).

9 Commission & Configure Your Devices
All Lightcloud products can be commissioned and configured by:
- Logging on to lightcloud.com
- Calling RAB at 1 (844) LIGHTCLOUD
- Emailing us at support@lightcloud.com
Functionality

Overview

STATUS INDICATOR:
• Solid GREEN when connected to your Lightcloud network
• Blinking RED when not connected to a Lightcloud network. The device will automatically continue trying to connect to a network that is in Setup Mode.

POWER INDICATOR:
Illuminated when powered. Blinking when indicated from the Lightcloud application.

SIGNAL INDICATOR:
After the Device Button has been pressed, this indicator illuminates when the device receives a message and indicates the strength of the signal.
3 - Best Signal
2 - Acceptable Signal
1 - Unacceptable Signal
Consult the “Finding a Location” section for more information.

DEVICE BUTTON:
• Press once to highlight this device in the Lightcloud Application (pressing once also enables display of the Signal Indicators)
• Press twice to toggle circuit on and off
• Press twice and hold to set dim level
• Press and hold for 10 seconds to remove this device from a Lightcloud network

MOTION INDICATOR:
Illuminates when motion is detected

SENSOR:
Passive-infrared motion sensor
Functionality (cont’d)

Features: Passive Infrared Motion Detection

OCCUPANCY & VACANCY SENSING:
The Lightcloud Sensor can operate in either Occupancy or Vacancy Sensor modes, selectable via the Lightcloud application. In Occupancy mode, the attached circuit will be switched on when motion is detected, and off (or dimmed) when the timeout expires. In Vacancy mode, the attached circuit will be turned off when the motion timeout expires, but will only be turned on via the Lightcloud application, Lightcloud Wall Switch, or similar. Motion detection and timeout can still be used via Lightcloud Automations to control other devices.

CONTROLLER MODE:
In Controller Mode, the attached circuit is controllable as an independent zone in the Lightcloud application. Motion detection and timeout can still be used via Lightcloud Automations to control other devices.

RANGE TEST MODE:
When Range Test Mode is activated via the Lightcloud application, the timeout period is shortened so that you can test different sensitivities quickly. All indicators will go off except for the Motion Indicator. When satisfied, turn off Range Test Mode to continue normal operation.
POWER LOSS DETECTION:
If power to the Sensor is lost, the device will detect this and alert the Lightcloud application.

EMERGENCY DEFAULT:
If communication is lost, the Sensor may optionally fall back to a specific state, such as turning the attached circuit on. This may be configured via the Lightcloud application or by calling RAB.

POWER MEASUREMENT:
The Lightcloud Sensor is capable of measuring the power usage of the attached circuit. In order to utilize this function, the neutral wire of the load must be connected to the white-red switched neutral wire. If this wire is not used, it should be tied to the regular neutral wire (i.e. all neutral wires joined).

FCC Information:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

Note: This device has been tested and found to comply with the limits for Class B digital devices pursuant to Part 15 Subpart B, of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential environment. This equipment generates, uses, and can radiate radio frequency energy, and if not installed and used in accordance with the instructions in the manual, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try and correct the interference by one or more of the following measures:
• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

To comply with the FCC’s RF exposure limits for general population / uncontrolled exposure, this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter.

CAUTION: Changes or modifications to this equipment not expressly approved by RAB Lighting may void the user’s authority to operate this equipment.

Functionality (cont’d)

Features

0-10V DIMMING:
0-10V is a common method of low-voltage control of dimmable drivers and ballasts.
Purple: 0-10V positive | Gray: 0-10V common
Note: The National Electrical Code requires that low-voltage wiring used in the same enclosure as high voltage wiring have an equal or better insulation rating. You may need to complete your low-voltage wiring in another enclosure or use a partition.

DEVICE IDENTIFICATION:
For help with installation, there are two ways to identify this device:
• Pressing the Device Button on the actual product will produce a message in the Lightcloud application indicating which device you are working with.
• Pressing the “Indicate” button in the Lightcloud application will cause the device’s Status Indicator to blink green. This will also switch the device’s relay on and off repeatedly, allowing you to quickly identify which circuit it is.

FCC Information:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and

Lightcloud Controller
(Or similar Lightcloud actuation device)

WE’RE HERE TO HELP:

1 (844) LIGHTCLOUD
1 (844) 544-4825
support@lightcloud.com
Finding a Suitable Location

Lightcloud uses a wireless mesh network to connect devices such as the Dimmer to the Gateway. Unlike a WiFi router, each Lightcloud device may connect another device to the network. If there is a clear line of sight between two Lightcloud devices, they can be placed up to 1000 feet apart. If the two devices are separated by ordinary drywall construction, try to keep them within 100 feet of each other. Brick, concrete and steel construction may require additional AC-powered Lightcloud devices to go around the obstruction. See the Deployment section of your Gateway for more information.
Setup & Installation

1 Turn off power

2 Install the Touch

a. Choose a junction box at which to install the Touch, keeping in mind the guidelines from "Finding a Suitable Location".
b. Affix the bracket to the wall using the six #6-18 x 1" screws included.
c. Connect hot and neutral wires to the wires on the back of the Touch as shown in the “Wiring” section.
d. Hang the touch from the bracket.
e. Tighten bracket screws on bottom surface of device.
Setup & Installation (cont’d)

3 Labeling your device

For setup and maintenance, we provide two Lightcloud Device Tables with the Gateway: one that you can attach to your panel and one to hand off to a building manager. Attach the Device Identification stickers included with each device to a row, then write in additional information, such as Zone name, Panel/Circuit Number, and whether or not a zone uses dimming.
Enabling your device

4a  Turn the Touch on by holding the power button on top.
Setup & Installation (cont’d)

4 Enabling your device (cont’d)

4b Call RAB at 1 (844) LIGHTCLOUD, or email us at support@lightcloud.com, to add the Touch to your Lightcloud network.
Once the Touch has joined your network, you’ll see the screen below.
Functionality

Configure
All Lightcloud products can be commissioned and configured by:

- Logging on to lightcloud.com
- Calling RAB at 1 (844) LIGHTCLOUD
- Emailing us at support@lightcloud.com

1 Configuring the Touch by calling or emailing RAB

1 (844) LIGHTCLOUD
1 (844) 544-4825
support@lightcloud.com
Configuring the Touch using the web/mobile application

2a Navigate to https://control.lightcloud.com and log in.
2b Click the menu icon in the top left.

Functionality (cont’d)

2 Configuring the Touch using the web/mobile application (cont’d)
2c Navigate to your Site, then click Devices.

2d Find your Touch device in the Device List on the left.
Functionality (cont’d)

2. Configuring the Touch using the web/mobile application (cont’d)

2e. Click the icon to add zone and/or scene controls to your Touch.

In this example, we've configured our Touch to control two zones and one scene:
Within a few seconds, the tablet UI refreshes to reflect our changes.
FCC Information:
This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

These limits are designed to provide reasonable protection against harmful interference in a non-residential installation. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference with radio or television reception, which can be determined by turning the equipment off and on, you are encouraged to try to correct the interference by one or more of the following measures:

• Reorient or relocate the antenna.
• Increase the separation between this equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

To comply with FCC RF exposure limits for general population/uncontrolled exposure, this transmitter must be installed to provide a separation distance of at least 20cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter.

CAUTION: Changes or modifications to this equipment not expressly approved by RAB Lighting, Inc. may void the user’s authority to operate this equipment.
